

### **AMENDMENTS TO THE CLAIMS**

This listing of claims will replace all prior versions, and listings, of claims in the application.

#### **Listing of Claims**

1. (Currently Amended): A system for displaying order confirmation information in connection with an audibly placed order, the system comprising:

a. a point-of-sale information service for generating order information received via the audibly placed order;

b. an order confirmation information service for transforming order confirmation information generated by the point-of-sale information service in a format native to the point-of-sale information service into a browser readable, tagged data format, wherein the browser readable order confirmation information is comprised of order confirmation information that can be rendered by a browser;

c. a file server for ~~servicing~~ sending the browser readable order confirmation information; and

d. a browser for requesting the order confirmation information from the file server and displaying the browser readable order confirmation information.

2-3. (Cancelled)

4. (Currently Amended): The system of ~~claim 2~~ claim 1, wherein the point-of-sale order information service transmits the tagged order confirmation information to the order confirmation information service.

5. (Original): The system of claim 4, wherein the point-of-sale information service transmits the tagged order confirmation information to the order confirmation information service at a predetermined time.

6. (Original): The system of claim 5, wherein the predetermined time is after a new item ordered.
7. (Original): The system of claim 4, wherein the order confirmation information service further comprises a parser, wherein the parser transforms the tagged order confirmation information into a browser readable format.
8. (Original): The system of claim 7, wherein the browser readable format is HTML.
9. (Original): The system of claim 7, wherein the browser readable order confirmation information is transmitted to the file server.
10. (Original): The system of claim 9, wherein the browser readable order confirmation information is transmitted by the file server to the browser in response to a request from the browser.
11. (Original): The system of claim 1, wherein the file server is a web server.
12. (Original): The system of claim 1, wherein the order confirmation information service is configured to select suggestive selling information.
13. (Original): The system of claim 12, wherein the suggestive selling information selected by the order confirmation information service is transmitted by the order confirmation information service to the file server.
14. (Original): The system of claim 13, wherein the suggestive selling information is transmitted by the file server to the browser.

15. (Original): The system of claim 14, wherein the selected suggestive selling information is displayed by the browser.

16. (Original): The system of claim 12 wherein the suggestive selling information selected by the order confirmation information service is based on a rules base and responsive to an item selected by the browser.

17. (Currently Amended): A method for displaying order confirmation information in connection with an audibly placed order, the method comprising:

a. generating order information via a point-of-sale information service in a format native to the point-of-sale information service, wherein the order information is based on the audibly placed order;

b. transforming order confirmation information generated by the point-of-sale information service into a browser readable, tagged data format via a order confirmation information service, wherein the browser readable order confirmation information is comprised of order confirmation information that can be rendered by a browser;

c. ~~serving~~ transmitting the browser readable order confirmation information via a file server; and

d. requesting the order confirmation information from the file server via a browser and displaying the browser readable order confirmation information via the browser.

18. (Currently Amended): A computer readable medium containing a computer software for displaying order confirmation information in connection with an audibly placed order, the computer software comprising program instructions that:

a. generates order information via a point-of-sale information service in a format native to the point-of-sale information service, wherein the order information is based on the audibly placed order;

b. transforms order confirmation information generated by the point-of-sale information service into a browser readable, tagged data format via a order confirmation

information service, wherein the browser readable order confirmation information is comprised of order confirmation information that can be rendered by a browser;

c. serves sends the browser readable order confirmation information via a file server; and

d. requests the browser readable order confirmation information from the file server via a browser and ~~displaying~~ displays the browser readable order confirmation information via the browser.

19-20. (Cancelled)
